EXCLUSIVE FERTILIZER PROGRAM

SPRING

Starting in the spring (March 1st thru May 1st) the first application should be **16-4-8-3-2+trace+lime**. This is also the time to apply **lime**, **crabgrass preventer**, and **weed killers**. Then your next application will follow **6 weeks later**. This application will be **10-10-10-4-2+trace+lime**.

SUMMER

Water! Water! Water!

Apply an application of weed killer in late August.

FALL

These months are when we will focus on root development and is the ideal time to apply lime and to sow grass seed. This is the key to making strong turf that will survive the hot summer ahead.

Starting in September, apply **10-10-10-4-2+trace+lime**.

4-6 weeks later apply the 2nd application **9-15-10-3-2+trace+lime**. **4-6 weeks** later apply your **last application**, **9-15-10-3-2+trace+lime**; this is usually in late November or December.

What makes Stone and Mulch Center's fertilizer different from others?

The Agricultural Extension Service from Virginia Tech has specially formulated all of Stone and Mulch Center's fertilizers for Stafford County soils. In addition to the basic nutrients found in the standard fertilizer, Virginia Tech's Agricultural Extension Service has included sulfur, iron, palletized lime, and six different trace elements.

Stone & Mulch Center is also proud to offer grass seed formulated for this area by Virginia Tech. These blends are for sunny or shady areas, which have high traffic areas. Please feel free to ask us more about these products or any others.
